Measuring Balance and Walking of Adults with Cerebral Palsy

A research study

We want to learn how balance is affecting walking abilities of adults with cerebral palsy (CP). We are looking for participants who can come to UNC-Chapel Hill for 2-4 sessions in which we will evaluate their balance and walking.

Who can participate?

Adults (age 18-55) diagnosed with CP who
- use walking in everyday life, and
- can walk for 10 minutes with or without crutches or canes.

Compensation provided for participants

For more information, or to participate contact:
