What is Aphasia?

Aphasia is caused by a:

- Stroke
- Tumor
- Brain Injury
- Infection
Aphasia is a **language problem**.

You can have difficulties with:

- Speaking
- Understanding
- Reading
- Writing
But...

Aphasia **does not** affect intelligence.
Many **different ways** of **communicating**.

**Talking**

**Writing**

**Drawing**

**Gesturing**

**Communicate using each** of these **daily**.
You can get **better every day** at communicating.

You can **continue to recover for many years later**.
Remember you are not alone!

About 1 million people have aphasia.

Find a local aphasia support group at http://www.aphasia.org/site/.
