

**Seeking research participants with speech difficulties
after stroke or traumatic brain injury:**

“Computerized Speech Assessment System”

*Department of Allied Health Sciences
UNC-Chapel Hill School of Medicine*

We are seeking research participants for a study that will examine the stability of a newly developed speech test. The test is designed to be brief and give intelligibility measures of the highest quality. Participants will receive a summary of the test results and \$40.00 upon study completion. The study involves:

- 1) Clinical speech and language testing and a hearing screening
- 2) Computerized speech testing based on saying short words
- 3) Approximately 2 hours of testing

Testing can be done at our clinics in or the participant's home, whichever is preferable.

For more information, please contact Katarina Haley, PhD., CCC-SLP
(Katarina_Haley@med.unc.edu, 919-966-9460) or Denise Caignon, M.S., SLP Clinical
Fellow (Denise_Caignon@med.unc.edu, 919-843-3699)

Study approved by the UNC Biomedical IRB (Study # 08-0839)
