

Preparing Speech-Language Pathologists and Occupational Therapists for Working in Teams: Focus on High-Need, Socioculturally Diverse Children With Disabilities and Their Families

This interdisciplinary program draws on the resources and expertise from the Divisions of Speech and Hearing Sciences and Occupational Science and Occupational Therapy within the School of Medicine and many research and service programs in the surrounding campus/community. The grant is focused on preparing practitioners to work in teams with families and children with disabilities who are experiencing poverty, whose primary language is not English (Spanish in particular), who are from minority racial or ethnic groups, or who may be immigrants.

Special Program Features
