

TABLE 2–LIST OF LABORATORY TESTS USEFUL FOR THE DIAGNOSIS OF AvWS

Type of test	References (*)
Bleeding time (min)	
Closure time by PFA-100 (sec)	(172, 178)
APTT (sec)	
FVIII:C (U/dL)	
VWF:RCo (U/dL)	
VWF:CB (U/dL)	(135, 177, 179)
Ristocetin induced platelet Agglutination (RIPA, mg/ml)	(6-8, 10)
Plasma vWF multimers	(15, 23, 43, 54, 60, 80, 107, 116)
Platelet vWF	(45, 76, 85, 116, 119, 141, 142, 144)
VWF subunit	(52, 101, 108, 120, 142, 150, 169)
VWF propeptide (U/dL)	(147, 176)
FVIII/vWF activities after mixing test with normal plasma:	
anti-FVIII:C; anti-vWF:RCo; anti-CB; anti-vWF:Ag	(45)
Binding of Immunoglobulins to immobilized vWF from concentrates or plasma	
Test for inhibitors by using solid-phase systems	(6-8, 18, 47, 137, 173, 174)

(*) Specific references in case of new additional tests are indicated
