Obtaining your Network Card's Hardware Address

1. On your computer, click Start → Run.
2. Next, type `cmd` and click the OK button.

3. In the new screen that appears, type `ipconfig /all` and press Enter.

4. You will see the Windows XP IP Configuration information. Your screen will be similar to this, but your numbers will be different.

5. Write down the **Physical Address** in the *Ethernet Adapter Local Area Connection* section (or *Wireless Adapter* section) exactly as it appears. In this example, **00-0D-60-D0-20-3D** is the physical address for the *Ethernet Adapter Local Area Connection*, which is also the network card's hardware address. (**00-05-4E-48-CD-32** for the *Ethernet adapter Wireless Network Connection*).
