To program the Syringe Pump

1. Press 'on-off' switch (lower left corner of pump) to power on --- need to hold down for several seconds to activate.

2. Watch as system self-tests for the battery charge indicator (icon of a AA-type-battery with a % value) in the lower left portion of the screen. If battery is significantly depleted do not use. If unplugged for any reason the depleted battery can fail quickly and the pump will turn off.

---------- The following screens will advance as choices are entered. ----------

3. Select patient weight by pressing #1 through 4 (no need to press 'enter').

4. Select #6 ('ml/hr') for generic pump use (no need to press 'enter').

5. Press 'confirm' to advance.

6. Select syringe manufacturer (no need to press 'enter').

7. The syringe pump should automatically sense and identify the size of the syringe being used (up to and including 60ml syringes).

8. Press 'confirm' to advance.

9. Enter rate of infusion (this time you must press 'enter' to advance).

10. Enter a volume limit (and this time you must also press 'enter' to advance).

11. Review and 'confirm' final settings.

12. Attach tubing to patient and be sure clamp is open.

13. Press green 'start' button to begin infusion.

14. When completed flush syringe pump tubing with at least 3ml NS to complete the full dose.
Obtain syringe pump tubing from the Supply Pyxis (upper left-hand corner).

Attach medication syringe and slowly flush through (approx 2.8ml).

TO LOAD THE PUMP

1. Squeeze together the Syringe Plunger Release Levers (F) and pull out the Syringe Pump Driver (H).

2. Pull up the Syringe Barrel Clamp (D) and turn it to keep in raised position.

3. Place medication syringe in top shallow groove with the syringe barrel flanges fixed securely in the syringe barrel flange clips (G).

4. Squeeze together the Syringe Plunger Release Levers again (F) and slide the Syringe Plunger Driver (H) until the syringe plunger flanges can be fixed securely by the Syringe Plunger Holders (E).

5. Lift the Syringe Barrel Clamp (D) and turn it back to rest it down on the syringe barrel.

6. Secure the syringe pump tubing in the Tubing Holders (B).
