

BIOGRAPHICAL SKETCH

Provide the following information for the Senior/key personnel and other significant contributors.
Follow this format for each person. **DO NOT EXCEED FIVE PAGES.**

NAME: Joyce Besheer

eRA COMMONS USER NAME (credential, e.g., agency login): Joyce_Besheer

POSITION TITLE: Professor of Psychiatry

EDUCATION/TRAINING (*Begin with baccalaureate or other initial professional education, such as nursing, include postdoctoral training and residency training if applicable. Add/delete rows as necessary.*)

INSTITUTION AND LOCATION	DEGREE (if applicable)	Completion Date MM/YYYY	FIELD OF STUDY
Indiana University, Bloomington, IN	B.S.	12/1995	Psychology
University of Nebraska, Lincoln, NE	M.A.	5/1999	Biopsychology
University of Nebraska, Lincoln, NE	Ph.D.	5/2002	Biopsychology
University of North Carolina, Chapel Hill, NC	Postdoctoral	12/05	Behavioral Pharmacology

A. Personal Statement

Research in my laboratory is focused on understanding the neurobiology underlying behavioral pathologies of alcohol use disorder, with an emphasis on how stress impacts interoceptive and reinforcement processes. I have spent over 19 years examining the neurobiological mechanisms underlying alcohol self-administration, relapse-like behavior and sensitivity to the interoceptive effects of alcohol using drug discrimination methods and have extensive experience in these areas. In addition to my strengths in behavioral techniques, my lab also relies heavily on chemogenetic strategies, site-specific microinjections/viral injections, cannulae implantation to assess brain regional and circuitry regulation of behavior. We also utilize numerous molecular techniques such as immunohistochemistry, RT-PCR, western blot analyses, and microscopy to assess adaptive change in specific molecular targets. Together, these experiences have contributed to the multidisciplinary approach that I utilize in my projects.

I am committed to fostering a lab environment in which I can provide opportunities that will promote intellectual growth, confidence, independence, and promote diversity. I have a strong record of training postdoctoral, graduate, and undergraduate students and my lab regularly provides research opportunities for programs aimed at increasing diversity in science (i.e., PREP, SURF). My commitment to fostering a diverse scientific community and lab can also be demonstrated by my involvement at the university level. I am the Diversity Liaison for the Bowles Center for Alcohol Studies (BCAS) and the Chair of the BCAS DEI Committee. In the Department of Psychiatry, I also serve as a member on two DEI Committees. I am also heavily involved in leading science outreach programs as part of my role as an Investigator on the Information and Dissemination Component of the Bowles Center for Alcohol Studies P60 NIAAA grant.

Ongoing and recently completed projects that I would like to highlight include:

NIH/NIAAA R01AA028255 (MPI: Jin and Besheer) 10/1/2020 – 9/30/2023

Small molecule antagonist probes for the relaxin-3/RXFP3 system

The goal of this project is to develop compounds to target the relaxin-3 system and decrease alcohol drinking.

Role: co-PI

NIH/NINDS R01NS118563 (MPI: Linnstaedt and McLean) 10/1/2020 – 9/30/2025

FKBP51 antagonism to prevent chronic pain: optimizing efficacy & evaluating safety and mechanisms

This project will examine the therapeutic role of antagonizing FKBP51 for pain treatment.

Role: Investigator

NIH/NIAAA R01AA026820 (MPI: Jin and Kieffer)

9/1/18 – 8/31/23

GPR88 Agonist for Alcoholism Treatment

The goal of this project is to assess the efficacy of GPR88 compounds to reduce alcohol-related behaviors.

Role: Investigator

NIH/NIAAA P60 AA011605 (Kash)

12/1/17 – 11/30/22

Neuroimmune glutamatergic regulation of corticolimbic circuits in ethanol self-administration

Component #2: The goal of this project is to examine the contribution of neuroimmune signaling to escalated alcohol self-administration, and the impact on molecular changes. **There is also an Alzheimer's Disease supplement associated with this project.**

Role: Project Lead

NIH/NIAAA P60 AA011605 (Kash; Robinson – Core PI)

12/1/17 – 11/30/22

Research Translation/Information Dissemination Component

The function of this Core is 1) to disseminate information about alcohol abuse to healthcare professionals and 2) to reach out to youth/educators within the community to inform them of the dangers of alcohol abuse.

Role: Investigator

NIH/NIAAA R01AA026537 (Besheer)

9/12/17 – 9/30/22

Characterization of alcohol self-administration following predator odor exposure: relevance to PTSD

The goal of this project is to validate a preclinical model of PTSD and investigate the accompanying molecular and circuitry adaptations. **There is also a diversity supplement R01AA026537-S1 associated with this project.**

Role: PI

NIH/NIAAA R01AA024095 (MPI: Morrow and Besheer)

5/15/17 – 3/31/22

Gene delivery of neuroactive steroids to modulate ethanol reinforcement/consumption

The goal of this project is to examine the impact of the gene delivery of neuroactive steroids on alcohol self-administration and relapse-like drinking.

Role: co-PI

NIH/NIAAA R01AA025582 (MPI: Kash and Besheer)

9/1/16 – 8/31/22 (1 yr NCE)

Unbiased analysis of molecular and circuit targets of low dose alcohol

The goal of this project is to identify and test the causal role of brain circuits and molecules that are activated by low dose alcohol.

Role: co-PI

Completed Projects (last 3 years)

NIH/NIAAA R03AA026996 (MPI: Besheer and Parnell)

9/1/18 – 8/31/21 (1 year NCE)

Consequences of prenatal alcohol and cannabinoid co-exposure on alcohol self-administration in adolescence

This project examines consequences of prenatal alcohol+cannabinoid exposure in adolescent offspring.

Role: co-PI

NC TraCS 550KR211905 (Besheer and Blough)

7/1/19 – 2/1/21

Developing anatabine analogs as novel therapeutics for alcohol use disorders

Role: co-PI

R21DA039356 (Besheer and Bevins)

4/1/16 – 3/31/19 (1 yr NCE)

Interplay between interoception, learning, and drug seeking

Role: co-PI

B. Positions, Scientific Appointments, and Honors

Positions and Employment

10/2020-present Professor, Department of Psychiatry, University of North Carolina-Chapel Hill

2020-present Associate Director for Translational Research Development, Bowles Center for Alcohol Studies, University of North Carolina-Chapel Hill

2020-present Chair, DEI Committee, Bowles Center for Alcohol Studies, University of North Carolina-Chapel Hill

2020-present Diversity Liaison, Bowles Center for Alcohol Studies, University of North Carolina-Chapel Hill

2020-present DEI Taskforce member, Department of Psychiatry, University of North Carolina-Chapel Hill

2015-10/2020	Associate Professor, Department of Psychiatry, University of North Carolina-Chapel Hill
2017-present	Chair, Addiction Working Group UNC Department of Psychiatry
2012-2015	Assistant Professor, Department of Psychiatry, University of North Carolina-Chapel Hill
2005-2012	Research Assistant Professor, Department of Psychiatry, University of North Carolina-Chapel Hill
2002-2005	Postdoctoral Research Associate, University of North Carolina-Chapel Hill, Bowles Center for Alcohol Studies, Supervising P.I. - Dr. Clyde Hodge
1997-2002	Graduate Research Assistant, University of Nebraska-Lincoln Department of Psychology, Supervising P.I. - Dr. Rick Bevins
1996-1997	Research Assistant, Indiana University-Bloomington Department of Psychology/Program in Neural Science Supervising P.I.- Dr. Preston Garraghty

Scientific Appointments and Professional Memberships

2021-present	Vice Chair, Gordon Research Conference, Alcohol and Nervous System – Feb 27, 2022; [co-Chair for the 2024 meeting]
2021	Reviewer, ZAA1 CC-(12) Integrative Neuroscience Initiative on Alcoholism (INIA) Consortia – Neuroimmune, October 19
2021	Reviewer, ZGM1 TWD-5 (PR) S Review of NIGMS Postdoctoral Research Associate Training (PRAT), March 25
2020	Reviewer and co-Chair, Biophysical, Physiological, Pharmacological and Bioengineering Neuroscience, F03B, NIH CSR Study Section, June 25 – 26
2020	Reviewer, ZGM1 TWD-5 (PR) S Review of NIGMS Postdoctoral Research Associate Training (PRAT), March 16
2019	Reviewer and co-Chair, Biophysical, Physiological, Pharmacological and Bioengineering Neuroscience, F03B, NIH CSR Study Section, Feb 28 – Mar 1; June 13 – 14 (co-Chair); October 24 – 25 (co-Chair)
2018	Reviewer, Special Emphasis Panel, ZRG1 BBBP-Y 02, NIH CSR Study Section, Mar 22, Nov 15
2016-present	Review Editor, Frontiers in Pharmacology - Translational Pharmacology
2015-present	Board of Editors, Journal of the Experimental Analysis of Behavior
2013-present	International Society for Biomedical Research on Alcoholism
2012	Ad hoc member, Neurotoxicology and Alcoholism (NAL), NIH CSR Study Section, Jan 30
2009	Reviewer, NC TraCS \$10K Pilot Award Program
2007	Reviewer, Graduate Women in Science Fellowships
2002-present	Research Society on Alcoholism
1997-present	Society for Neuroscience

Selected Honors and Awards

2021	HHMI Gilliam Fellow co-mentor
2017	Mentor of the Year, Curriculum of Neuroscience at UNC – Chapel Hill
2004	Enoch Gordis Research Recognition Award Research Society on Alcoholism
2000-2002	National Research Service Award National Institute on Drug Abuse (NIDA)
2000-2001	Fling Fellowship University of Nebraska-Lincoln Graduate Studies Department
1999-2000	Wheeler Fellowship University of Nebraska-Lincoln Graduate Studies Department
1999	Outstanding Graduate Research Assistant Award University of Nebraska College of Arts and Sciences

C. Contributions to Science

Novelty seeking and reward

My initial training and publications focused on the dopaminergic and cholinergic mechanisms underlying novelty seeking and reward. The interest in the behavioral and neurobiological underpinnings of novelty is related to personality constructs such as novelty and sensation seeking. Such behaviors are positively correlated with risk-taking behaviors such as drug use, high risk sexual behavior, and risky driving practices. Therefore, an

underlying assumption is that engaging in novelty-related behaviors has some appetitive or rewarding component that maintains these risky behaviors. Our work focused on characterizing different behavioral models to measure novelty seeking and novelty conditioned reward in rat models. We showed that dopaminergic and cholinergic mechanisms were important for the detection of novelty and conditioned reward. Further, as part of my dissertation work, I was able to demonstrate that these behavioral assays were reliable tools for the measurement and characterization of nicotine withdrawal-induced anhedonia.

Interoceptive drug conditioning

The ability of stimuli associated with drugs to modulate behavior has been well established in the literature. Such stimuli can be both environmental/contextual or interoceptive (i.e., internal drug effects). Similar to environmental stimuli, interoceptive/internal stimuli can play a fundamental role in incentive motivational processing, as a consequence of being associated with other reinforcing events (e.g., peer-acceptance, work breaks). As such, these conditioned drug states have the potential to promote drug taking and relapse following periods of abstinence. Our publications show that a conditioned interoceptive drug state can rapidly come to gain control of goal-tracking behavior. Therefore, one of the advantages of these Pavlovian drug discrimination procedures is that they present to the literature additional tools by which to assess interoceptive drug effects, as there may be experimental situations in which short-term training procedures may be more suitable than longer-term operant drug discrimination procedures (e.g., adolescence).

Preclinical evaluation of potential therapeutic targets for alcohol drinking

Examination and identification of novel therapeutic targets for the treatment of alcohol use disorders is critical in order to broaden the availability of therapeutic options. Through the years, working in collaborations and as a PI, I have engaged in such preclinical studies investigating a diverse range of targets and their modulatory role in alcohol-related behaviors, with a focus on alcohol self-administration, relapse-like behavior and withdrawal.

Impact of stress on sensitivity to alcohol interoceptive cues and self-administration/relapse.

Stressful life events and chronic stressors have been associated with escalations in alcohol drinking. Altered sensitivity to the subjective/interoceptive effects of alcohol has been presented as a possible behavioral mechanism for escalated alcohol drinking during episodes of heightened elevations in glucocorticoid levels, such as stress. That is, during these episodes, an individual may consume more alcohol to achieve the desired interoceptive effects. Our publications show that following an episode of heightened elevations in corticosterone,

rats are less sensitive to the interoceptive effects of alcohol and rats show transient increases in alcohol self-administration. We also show that exposure to predator odor can produce increases in alcohol self-administration that are related to stress-reactivity during the predator odor stressor exposure. In these studies, we have focused on adaptations in glutamatergic signaling and the functional consequences of these changes to the behaviors. I serve as the PI on these projects.

Interoceptive alcohol effects and alcohol self-administration/relapse: mechanisms and circuitry

Drug taking and seeking behavior can be influenced by interoceptive drug effects. For example, the interoceptive cues that an individual experiences/attends to can prime further drug-taking (e.g., interoceptive effects of a low alcohol dose may prime more drinking) or signal satiety (e.g., interoceptive effects of a higher alcohol dose may limit further drinking). While it is experimentally difficult to determine the direct and specific contribution of the interoceptive effects of alcohol on alcohol self-administration/drinking in preclinical models, our research strategy has incorporated examining these behaviors in parallel, as changes to the interoceptive effects can inform and present important behavioral mechanisms for changes in drinking and relapse. To this end, our published studies have taken on multidisciplinary approaches and identified neural substrates and circuitry required for the expression of the interoceptive effects of alcohol. I served as the PI on these projects.
