UNC MEDICAL CENTER

Shorter. Safer. Better.

Will you pledge to use the shortest effective antimicrobial durations?

Too often, patients receive longer-than-needed antimicrobial treatment for common infections, when a shorter duration would be equally effective.

Shorter durations:

- Have fewer side effects and complications
- Lead to shorter hospital stays, lower costs, and improved patient adherence
- May slow antimicrobial resistance, keeping these life-saving drugs effective for longer

Take the Pledge. Scan the QR code or visit www.med.unc.edu/casp to learn more.

Shorter. Safer. Better. is a campaign of the Carolina Antimicrobial Stewardship Program of UNC Medical Center.
