A competent and knowledgeable clinical research workforce is essential for the successful conduct of clinical research. Academic medical centers across the U.S. recognize this and are developing high-quality competency-based education and training materials for clinical research professionals.

The DIAMOND portal brings these training materials to you!

**DIAMOND Portal**

The Development, Implementation and Assessment of Novel Training in Domain-based Competencies, or “DIAMOND”, is a collaborative effort to provide a nationally crowd-sourced, federated, online catalog for clinical research practitioners to access and share training materials. The DIAMOND project was initiated as a way to disseminate materials developed at Clinical and Translational Science Award (CTSA) Program Hubs to broader audiences around the world. [Click here](#) to learn more about the DIAMOND project from the developers.

The DIAMOND portal includes training materials in eight different competency domains, ranging from the specifics of clinical trial operations to more general topics, such as leadership and professionalism. The portal also includes assessments for study teams to confirm staff members are adequately trained.

Visit the portal to explore which competency-based educational offerings and assessment training resources to add to your portfolio of training resources.

A good way to start using the portal is to search trainings by keyword. You can also browse trainings and use filters to further narrow your search.

**Your feedback is important!**

If you have suggestions for improvements or new resources, please [let us know](#).
