Health Recommendations
2108 North Carolina Women’s Health Report Card

Always consult with your doctor if you have a higher risk for any of the following conditions, or have concerns.

**RECOMMENDATIONS BASED ON AGE**

<table>
<thead>
<tr>
<th>Age</th>
<th>Recommendations</th>
</tr>
</thead>
<tbody>
<tr>
<td>18-39</td>
<td>A standard drink is equal to 14 grams (0.6 ounces) of pure alcohol. Moderate drinking for women is defined as having up to 1 drink per day. Heavy drinking for women is defined as 8 or more drinks a week. Binge drinking for women is defined as 4 or more drinks within about 2 hours. Women who may become pregnant or who are pregnant should not drink alcoholic beverages.</td>
</tr>
<tr>
<td>40-49</td>
<td>Get tested at least every 2 years if you have normal blood pressure (lower than 120/80).</td>
</tr>
<tr>
<td>50-64</td>
<td>Get tested once a year if you have blood pressure between 120/80 and 139/89. Discuss treatment with your doctor or nurse if you have blood pressure 140/90 or higher.</td>
</tr>
<tr>
<td>65+</td>
<td>Get this test at least once. Talk to your doctor or nurse about repeat testing.</td>
</tr>
</tbody>
</table>

**ALCOHOL USE**
Excessive alcohol consumption can have social and medical implications. Studies have shown that alcohol use during pregnancy can result in long-term complications for the child.

**BLOOD PRESSURE TEST**
Having high blood pressure means the pressure of the blood in your blood vessels is higher than it should be. This common condition increases the risk for heart disease and stroke, two leading causes of death for Americans.

**BONE MINERAL DENSITY TEST**
Osteoporosis or “porous bone” is a disease of the skeletal system characterized by low bone mass and deterioration of bone tissue. Osteoporosis leads to an increased risk of bone fractures, typically in the wrist, hip, and spine.

**BREAST CANCER SCREENING**
Breast cancer is the most common cancer among American women.

**BREASTFEEDING GUIDELINES**
Breastfeeding results in improved infant and maternal health outcomes.

---

### Cervical Cancer Screening
The Pap test (or Pap smear) looks for precancers—cell changes on the cervix that might become cervical cancer if they are not treated appropriately. When cervical cancer is found early, it is highly treatable and associated with long survival and good quality of life.

### Chlamydia Test
Chlamydia is the most commonly reported STI in the United States. Although it is easy to cure, chlamydia can make it difficult for a woman to get pregnant if left untreated.

### Cholesterol Test
Excess cholesterol can build up within the arteries and lead to heart disease.

### Colorectal Cancer Screening
Detected the presence of precancerous polyps—abnormal growths in the colon or rectum. Screening helps find colorectal cancer at an early stage, when treatment can often lead to a cure.

### Dental Visits
Regular dental visits aid in the prevention and detection of tooth decay, oral cancers, and other diseases.

### Diabetes Screening
Diabetes is a disease in which blood glucose levels are above normal. Diabetes can cause serious health complications including heart disease, blindness, kidney failure, and lower-extremity amputations.

### Recommendations Based on Age

<table>
<thead>
<tr>
<th>Age Range</th>
<th>Recommendations</th>
</tr>
</thead>
<tbody>
<tr>
<td>18-39</td>
<td>Get a Pap test every 3 years if you are 21 or older and have a cervix. If you are 30 or older, you can get a Pap test and HPV test together every 5 years.*</td>
</tr>
<tr>
<td>40-49</td>
<td>Ask your doctor or nurse if you need to get a Pap test.*</td>
</tr>
<tr>
<td>50-64</td>
<td>You need to get tested for chlamydia if, in the past year or since your last test, you: had a new sex partner; had your sex partner tell you they have chlamydia; traded sex for money or drugs; did not use condoms during sex and are in a relationship that is not monogamous; or if you have had any symptoms of chlamydia.*</td>
</tr>
<tr>
<td>65+</td>
<td>Adults who do not have heart disease may need their cholesterol checked every 4 to 6 years. Adults who have heart disease should talk to their health care team about how often to have their cholesterol checked.^</td>
</tr>
</tbody>
</table>

**EAT WELL**
Eating healthy is a journey shaped by many factors, including our stage of life, situations, preferences, access to food, culture, traditions, and the personal decisions we make over time.

**GONORRHEA TEST**
Gonorrhea is a sexually transmitted infection which, if left untreated, can cause serious health problems, including problems getting pregnant.*

**HEALTH INSURANCE**
The Affordable Care Act requires most U.S. citizens and legal residents to have health insurance. Speak to your employer, or visit www.healthcare.gov to learn about Marketplace or Medicaid/CHIP coverage.

**HIV TEST**
HIV (human immunodeficiency virus) is the virus that can lead to acquired immunodeficiency syndrome, or AIDS.^

**HPV VACCINE**
Human papillomavirus (HPV) is the most common sexually transmitted infection in the United States. HPV can lead to health problems such as genital warts and cancer.^

**INFLUENZA VACCINE**
Influenza is a serious disease that can lead to hospitalization and sometimes even death. Every flu season is different, and influenza infection can affect people differently.^

### Recommendations Based on Age

<table>
<thead>
<tr>
<th>Age Group</th>
<th>Recommendations</th>
</tr>
</thead>
<tbody>
<tr>
<td>18-39</td>
<td>Abuse is never acceptable. Visit <a href="http://www.thehotline.org">www.thehotline.org</a>, call 800-799-SAFE (7233), or speak to a trusted medical provider to learn more about getting help.</td>
</tr>
<tr>
<td>40-49</td>
<td>Perform 150 minutes of moderate intensity aerobic physical activity each week. Also do muscle-strengthening activities on at least 2 days each week. Currently inactive adults should work up to the recommended guidelines.*</td>
</tr>
<tr>
<td>50-64</td>
<td>Women 65 and older should remain physically active. Discuss a plan with your doctor or nurse.#</td>
</tr>
<tr>
<td>65+</td>
<td>Discuss with your doctor or nurse to see if you are at a high risk of pneumococcal disease.^</td>
</tr>
<tr>
<td></td>
<td>All adults 65 and older should receive the vaccine.^</td>
</tr>
<tr>
<td></td>
<td>All adults 60 years of age or older should get the shingles vaccine.^</td>
</tr>
<tr>
<td></td>
<td>Get tested for syphilis if in the past year or since your last test, you: had a new sex partner; had your sex partner tell you they have syphilis; traded sex for money or drugs; did not use condoms during sex and are in a relationship that is not monogamous; or have any symptoms of syphilis.</td>
</tr>
</tbody>
</table>

---

**INTIMATE PARTNER VIOLENCE**

Abuse is never acceptable. Visit www.thehotline.org, call 800-799-SAFE (7233), or speak to a trusted medical provider to learn more about getting help.

---

**PHYSICAL ACTIVITY**

Adults who are physically active are healthier and less likely to develop many chronic diseases than adults who are inactive. They also have better fitness, including a healthier body size and composition.#

The major types of pneumococcal disease are pneumonia (lung infection), bacteremia (blood infection), and meningitis (infection of the covering of the brain and spinal cord). An estimated 5–7% of the population die from it each year.^

Shingles is a painful rash that usually develops on one side of the body, often the face or torso. For some people the pain can last for months or even years after the rash goes away. Risk increases with age.

Syphilis is a sexually transmitted infection that can have very serious complications when left untreated.^

---

**PNEUMOCOCCAL VACCINE**

Discuss with your doctor or nurse to see if you are at a high risk of pneumococcal disease.^

All adults 60 years of age or older should receive the shingles vaccine.^

All adults 65 and older should receive the vaccine.^

---

**SHINGLES VACCINE**

Women 65 and older should remain physically active. Discuss a plan with your doctor or nurse.#

---

**SYPHILIS TEST**

Syphilis is a sexually transmitted infection that can have very serious complications when left untreated.^
