

# Immunofluorescence

Direct and indirect immunofluorescence testing, along with specialized ELISA testing when necessary, are available 7 days per week to help diagnose immunologic disorders such as blistering diseases, connective tissue disease, and vasculitis.

Dr. Luis Diaz, the Director of the Immunofluorescence Service, is a world expert in immunobullous diseases, as well as Dr. Donna Culton, Co-Director of the Immunofluorescence Service.

He is available for clinical consultation as well as providing diagnostic expertise with immunofluorescence testing.

Specimens for direct immunofluorescence should be transported in bottles containing Michel's transport media (which we provide for you).
