

Slide Consultation/Second Opinion

We provide expert second opinion and consultative review for referring pathologists, clinicians, and patients on previously prepared slides that were originally diagnosed elsewhere.

Sometimes, this requires integrating results from other departments at UNC, including Molecular Pathology, Surgical Pathology, Genetics, and Dermatology, which we can coordinate and summarize in one concise report.

We also review material prepared elsewhere for patients who are referred for treatment at UNC. When we are finished, we will send a report to the referring health care provider and to the pathologist who originally reported the case.
