The AuD Curriculum is designed to allow students to be assigned to clinical placements as soon as possible. Generally, students have semester long placements in the following core clinical areas: Adult hearing evaluation (Year 1), Adult hearing aid fitting (Year 1), Pediatric evaluation and hearing aid fitting (Summer 1), Cochlear Implants (Year 2), Balance assessment (Summer 2). Repeat placements are possible after core placements have been completed. Within each of these semester long placements, there may be opportunities for other clinical experiences (Auditory Evoked Response Testing, Tinnitus). Generally, students are in clinic for 1-1.5 full days in Year 1; students in Year 2 are in clinic 2 days per week; students in Year 3 are in clinic for 3 days per week. Summers are divided into 7–8-week blocks when students are in clinic 5 days per week.

Students complete 1 credit of Independent Study (which is a teaching assignment) during EITHER the Fall or Spring Semester of Year 3.
