

Announcement

8th Symposium on Hemostasis

Translational and Basic Science Discoveries

May 12-14, 2016

The symposium will be held in Chapel Hill, North Carolina

AGENDA

- **Interplay Between Coagulation and Inflammation**
- **Role of Intrinsic Pathway in Hemostasis and Thrombosis**
- **Novel Treatment Approaches**
- **Models of Bleeding and Thrombosis**
- **Activation of Coagulation in Diseases**

The focus will include the latest findings related to tissue factor, coagulation proteases and their role in hemostasis and thrombosis, as well as interplay between coagulation and inflammation.

Important new research on novel approaches for treatment of bleeding, animal models of bleeding and thrombosis, and activation of coagulation in disease will be presented.

Invited faculty are the world's foremost basic scientists and clinicians working in the field of hemostasis and thrombosis.
