Implementing Cancer Survivorship Care Plans
Addressing the Commission on Cancer Standard 3.3

Deborah K. Mayer, PhD, RN, AOCN, FAAN
Professor, School of Nursing
Director of Cancer Survivorship
UNC Lineberger Comprehensive Cancer Center

Team Members:
Adrian Gerstel, BA
Kinley Taylor, MS
Sarah Birken, PhD
Purpose of Care Plans

- Enhance communication
- Coordinate care
- Increase surveillance
- Identify and manage long term/late effects
- Encourage health monitoring and promotion

Hewitt et al., 2006; Ganz & Hahn, 2009; Earle, 2006; Jacobs et al., 2009; Salz et al, 2012.
Background

• Survivorship Care Plans (SCP) consist of a treatment summary and follow-up plan for cancer survivors.

• This is intended to be delivered to the patient and primary care provider when curative treatment ends.

• This is a new requirement of the American College of Surgeons Commission on Cancer.

• Previous research has demonstrated that it is time consuming to develop and has low and sporadic uptake.
Previous UNC SCP Efforts

• Implemented paper version prior to Epic in Stage I, II, III colon cancer patients
• Screened 75 patients → 49 eligible → 34 delivered (69%)
• Mean time to complete: **49 minutes** (SD = 27, range = 30–90) surgery SCP and **90 minutes** (SD = 48, range = 45–210) a surgery and chemotherapy SCP.
• Patients and PCP agreed/strongly agreed it was easy to understand and useful
• To time and labor intensive to track and complete

Aim

• To establish and initiate the processes for developing and delivering Survivorship Care Plans (SCP) to new adult oncology patients completing active treatment at North Carolina Cancer Hospital (NCCH) within the electronic health record, EPIC.

Who is involved with each of these steps?
Team Questions

- Who completes and enters Dx/Staging into EPIC?
- Who will estimate projected approx. treatment end date and track when SCP due?
- Who should receive the alert that SCP is due?
- What happens with the alert once received?
- How does the first follow-up visit get scheduled?
- Who will develop the SCP?
- Who delivers/shares/documents the SCP?
### More direct access to SCP in Epic

PDSA – Plan Do Study Act: Creation and delivery of SCP by GU Physician

**PLAN:** Bladder SCP template created with Beacon as workaround prior to 3/6/15 EPIC Rollout

**STUDY:** SCP was created in 5min. right before patient appointment; SCP easily printed & delivered immediately

**ACT:** This was a very simple straight forward patient with dx and staging already entered; Physician wants to get time to complete SCP down ~1 minute

**DO:** IHQI Staff & GU Physician met to review, create, print & deliver SCP to patient on day of his visit
Run Chart

**TIP SHEET**

**Oncology Treatment Summary (a.k.a. Survivorship Care Plan)**

With the new Treatment Summary activity, the entire care team can view, record, and share an overview of your patient's cancer treatment from a single location. The Treatment Summary, also known as a survivorship care plan (SCP), meets the standard set forth by the American College of Surgeons Commission on Cancer which specifies patients with non-metastatic disease should have and receive a survivorship care plan at the end of treatment.

### Create & Maintain a Treatment Summary

1. In the Problem List, click **Create Oncology Treatment Summary** under the cancer diagnosis.
2. The Treatment Summary sidebar opens and the default summary template for the cancer type appears in the **Template** field, if available. If not, a standard template appears. You can select a different template if needed.
3. The summary automatically contains some information from the chart. Press **F2** to work through the remaining fields.
4. Click **Save and Close**. The summary is available in the problem list for you to update as the patient undergoes treatment.

### Request Information from Another Provider

1. To request that another provider add information to a treatment summary, click **Route Summary** in the Oncology Treatment Summary window.
2. Click one or more recipient buttons, or use the search field to look for someone else.
3. Enter a message to accompany the treatment summary in the **Cover Page Message** field.

---

**BLADDER SCP TEMPLATE**
1. Mary Dunn, NP, created a SCP on an upcoming patient to demonstrate how this worked within Epic
2. Discussion of implementation for other GU tumors
3. Physicians shifted in perspective to agreeing it was important for the patient and PCP to have one, but concerned about sustainability
Provider Quotes

Angie Smith, MD

- "At first, SCP delivery was time consuming (taking up to 7 minutes per plan). With each modification, we were able to increasingly streamline the process. By the end, our SCP delivery has decreased to less than 1 minute from time of initiation to patient and PCP delivery.”

- “I have found that patients have responded favorably to SCPs. One particular patient was unable to follow-up at our institution due to travel and financial constraints. The SCP was instrumental in allowing him to transfer care to his local surgeon and provided him with confidence that his post-treatment surveillance would be carried out appropriately.”

Mary Dunn, NP-C

- “It's almost impossible to compare the early SCP version to the one we are currently using. The time it takes to complete the document has decreased dramatically, thanks to changes made to the document based on user feedback, and a quicker way (i.e. radio button) to access it, it now takes me about 2 minutes to complete.”

- “One of my patients had decided up front that she was going to have her cancer surgery at UNC, but wanted to get subsequent follow up at home due to travel distance and financial restraints. I saw her 6 weeks after her surgery to review and deliver her SCP. She was very pleased to have a ‘take home’ document that she could reference, share with her family, and with her local providers.”
What have we learned and where are we now?

Lessons:
• Start small → narrowed scope to bladder cancer but look for higher incidence of events
• Have inclusive team (then ask who else should be included)
• Keep key people informed of progress
• Ask for feedback
• Prepare for glitches along the way; Beacon upgrade created delays but simplified processes
• Presented to GU group for full implementation on all GU tumors 4/2/15

Next steps:
• Work with GYN group next (all SCP ready); then
• Expand PDSA to other disease groups; create disease templates, train, go live
• Tracking, reporting for 2015
Do I have cancer?
Will I die?
How long do I have?
What treatment is there?
How much will this cost?
Does my insurance cover it?
What do all these tests mean?
Will I be in pain?
Will I lose my hair?
Can I keep working?
What will this mean for my family?
What are the side effects?
What don't I know?

Any questions?
