

TITLE OF POLICY

TEC 2.0 Clinical Log Policy

PURPOSE AND SCOPE

The purpose of this policy is to outline the purpose and expectations of the clinical log required during Application Phase

RESPONSIBLE PARTY AND REVIEW CYCLE

The Application Phase Committee and Education Committee review annually

LCME REFERENCE(S)

LCME 6.2: Required Clinical Experiences

LCME 8.6: Monitoring of Completion of Required Clinical Experiences

HISTORY OF APPROVALS AND UPDATES

Approved by Education Committee December 2019

Approved by Application Phase Committee December 2025

Approved by Education Committee December 2025

DEFINITION(S)

Perform: Students are expected to independently carry out the task, procedure or clinical skill without assistance. For example, a student completes a history OR physical for a patient with COPD and develops a plan.

Participate: Students must actively engage in completing the activity or skill as part of a team or supervised setting. For example, a student works with a preceptor to interpret spirometry data or is actively engaged while a colleague presents a patient with the clinical condition.

Alternate Activity: Substitute experiences provided to meet the requirement when students do not encounter the activity during standard course sessions. For all skills log items, the alternative activity is a simulation assigned by the Course Director. For all other clinical log items, the alternative activity is one of the following: Aquifer Case, Simulation, or topic review/discussion assigned by the Course Director. If a student is completing a log item via an alternative activity, the activity must be assigned by the Course Director.

POLICY

Per accreditation standards (LCME 6.2), the school must establish a clinical log that students are required to complete by the end of the Application Phase. The clinical log specifies the types of patients and clinical conditions to be encountered, the skills to be performed, the appropriate clinical settings for these experiences, and the expected levels of medical student responsibility. Students are required to document clinical log items when they are encountered or, in the event that they do not encounter the item during the specified course, students are required to document the alternative learning experience assigned by the course

director.

The clinical log represents a mix of patient types, conditions, and procedures based on the educational program objectives and informed by each course's clinical disciplines and learning objectives. The clinical log items are distributed across the six Application Phase clinical courses where students will most likely encounter them. See Appendix 1 for the clinical log approved by the Education Committee in December 2025.

PROCEDURE(S)

Students are informed of the required clinical encounters and skills during Transition to Application Phase course and at orientation sessions for each clinical course. All students must complete a clinical log in its entirety by the conclusion of Application Phase, which they track in the school's evaluation system. To ensure completion, the following measures are in place:

- Course directors review the clinical log at the time of midcourse feedback and direct students to experiences to address outstanding items.
- Staff contact students with outstanding clinical log items at the conclusion of the course, directing them to alternatives experiences. Alternatives include simulations in the school's clinical skills center, computer-based modules, and additional clinical experiences. Staff track the completion of alternative experiences.
- Student logs will be audited by the course grading committee to evaluate for falsification which can result in loss of professionalism points, ineligibility of Honors, and/or referral to Student Progress Committee (SPC).
