

**Building:** Genetic Medicine

**Location:** Lower Basement, Suite 30

**Date of Issue:** 9/22/2021

**Date Location First Occupied:** 8/1/10

**Housing Type:** IVC

**Report#:** 2021-042959

**Species:** Mouse

**Testing Laboratory:** Charles River Diagnostic Laboratory

This report summarizes the results of tests performed on surrogate, cull and sentinel mice from all rooms in the MMRRC-UNC barrier-maintained production facility. Note data are reported as positive tests/total tests performed. Current positive results are bolded. Please contact the MMRRC-UNC at [mmrrc\\_health@med.unc.edu](mailto:mmrrc_health@med.unc.edu) with questions about this report or animal health issues.

**Latest Result** is the date animals are removed from the colony to begin the health testing process. Compilation of all results for web posting may take several weeks.

<sup>#</sup>From 2003-January 2007, Charles River was the testing Laboratory. February 2007- October 2011, RADIL was the testing Laboratory.

<sup>\*</sup>The MMRRC moved to a brand new animal facility in the Genetic Medicine Building from BerryHill Hall 8/1/10. Prior to 2010, fewer animals were sent for testing due to less rigorous standards in the previous facility.

<sup>‡</sup> November 2011, MMRRC-UNC switched all testing to Charles River Diagnostic Laboratory.

<sup>d</sup>Pinworms and tapeworms (*Aspiculuris tetraptera*, *Syphacia muris* and *Syphacia obvelata*).

<sup>e</sup>RADIL identifies these species and Charles River started identifying them in 12/2012.

\* A perianal tape test is performed in addition to an examination of cecal contents to detect for pinworms.

\*\* Test only done for contact sentinels with immunocompromised strains

‡ November 2011, MMRRC-UNC switched all testing to Charles River Diagnostic Laboratory.

# 8/1/2017 ectoparasite testing also included skin scraping for *Demodex musculi*
