AudioBooks & eBooks

Audiobooks are read to you by a recorded actor.
eBooks allow you to download the book, magnify
the type size and have the computer read to you
out loud.

Free Online eBooks

- Online Books
<http://onlinebooks.library.upenn.edu/>
- Gutenberg Project
<http://www.gutenberg.net/index.php>
- Net Library – 24,000 eBooks & 2,000 eAudiobooks.
Sign up thru your public library, then sign on to NC
Live, and finally to Net Library.

Living with Low Vision

Computer Settings for Low Vision

Have a comfortable chair and good posture to reduce physical fatigue.

Good lighting in general is an aid for low vision.

Minimize glare. Adjust lighting and screen angle.

Take a break every 20 minutes to limit eye strain.

<http://www.uveitis.org/low.html#>

<http://www.eterlab.com/eyedefender/>

<http://www.mdsupport.org/library/lighting.html>

The **Ott-Lite** "total- spectrum" bulb that produces high color rendering, while retaining excellent contrast and visual acuity. For persons with low vision, the implications for a light that provides enhanced contrast, sharpened clarity, and lower glare while it increases illumination and offers true color rendering are obvious. In addition, because the bulb is cool to the touch, it provides a more comfortable work space.

<http://www.ott-lite.com/Cms/vsp.aspx>

The following settings will allow you to simulate ZoomText using Microsoft Word.

Screen Resolution & Object Size for a PC

1. Right click on a clear area of the Desktop
2. Click on Properties on the drop down menu
3. *Alternate method, click on Start > Control Panel > Display.*
4. Click on Settings tab
5. Slide Screen Resolution to left (800 x 600)
6. Click on Appearance tab

7. Change Font Size to Large
8. Click on Apply
9. Click on Color Scheme tab
10. Choose High Contrast White or Black, to suit.
11. Click on Apply
12. Click on OK
13. In upper right corner of window, click on Full Screen center box just to the left of the X box.

Monitor Contrast & Brightness Settings

1. Use the Accessibility Wizard to set contrast & icon size.
2. Go to Start > All Programs > Accessories > Accessibility > Accessibility Wizard.
3. Follow instructions to set preferences.

Mouse Settings

1. Go to Start > Control Panel
2. Double click on Mouse icon
3. Click on Pointers tab
4. Check the Pointer Shadow box
5. Click on Pointer Options tab
6. Check the Display pointer trails box & set length to medium
7. Check the box marked Show Location of Mouse.
8. Click on Apply
9. Click on OK

When needed, press CTRL key repeatedly to find the mouse.

Mouse Dexterity Exercises

- <http://www.seniornet.org/howto/mouseexercises/mousepractice.html>

- <http://www.lakeco.lib.in.us/mouselinks.htm>

Computer Tips from SeniorNet

http://www.seniornet.org/jsnet/index.php?option=com_content&task=view&id=152&Itemid=1

Increase Website Visibility

1. To increase the contrast & invert the color of the font in a website, click on the paragraph, hold down the **CTRL** key & type **A**.
2. To increase the font size, hold down the **CTRL** key & roll the **MOUSE WHEEL** up. This works for most, but not all, websites.

Thumb Drives

Copy a book or any long document to a thumb drive, along with a screen reader, such as Browsealoud and SmartRead. Plug this into any computer, which will now be activatable & able to read. ZoomText is now available on a thumb drive.

Document Page Width for 800 x 600 resolution

1. In Word, go to File > Page Setup
2. Click on Margins tab
3. Set Left margin to 0.5
4. Set Right margin to 3.5
5. Click on OK
6. Select the entire document, CTRL A.
7. Format Paragraph Left-aligned.

This simulates Word Wrap.

Magnification in Microsoft Word

1. Open a Word document, if necessary.
2. Click in body of the document, if necessary.
3. Hold down the CTRL key

4. Roll the mouse wheel up & down to change the font magnification.

Read Out Loud in Microsoft Word

1. Open a Word document.
2. Click on Tools > Speech
3. The Speech Toolbar will appear.
4. Click mouse pointer where you want Speech to begin.
5. Click Speak in Language Toolbar.

Living with Low Vision

In an ad by an automotive company, there is a picture of a woman. She is strong, athletic. She is wearing a tee shirt and running shorts. She has only one leg; the other is a runner's high-tech prosthetic.

The caption reads "Don't ever give up. Not once. Not ever. My dream is to do extraordinary things every day. Life's calling. Where to next?"

This is the attitude we must bring to low vision.

Low Vision Care is not a surgical procedure or medicinal treatment, but rather a rehabilitative program to teach you new strategies to maximize your remaining vision.

There are a myriad of resources to help you live independently and productively. But there is a great deal of redundancy between manufacturers. Try several alternatives before you commit to a solution. Some of you may need our remedial computer lessons. Some of you may want to avoid computers altogether. Each person is different.

We will show these alternative assistives, some free, some inexpensive, some quite expensive. Magnifiers can range from a simple magnifying glass to an electronic closed circuit TV magnifier, such as a Topaz CCTV. Sometimes these freebies

will do the job for you. Sometimes you will choose the professional solutions for their quality & ease of use. You may find that screen magnification allows you to read a computer screen. Or you might find it better to have a computer or an iPod read out loud to you. It is up to you. It is your choice.

This course consists of three parts: the teachers, these notes and you. Of these, YOU are the most important part. Your willingness to work hard and to learn are essential for your success.

Review & prices for Zoom-Ex in Vision Access Magazine, Vol. 14, No. 4, Page 43.

<http://www.cclvi.org/vaccess/main.htm>

An inexpensive alternative approach is to scan the document on any scanner. Buy one that can scan bound books. This first step just makes a picture of

the document. Then run it thru OCR software such as IRIS, Kurzweil 1000 or FineReader, converting it to real text. Then read that file out loud with a screen reader.

The Apple Macintosh & its Special Strengths

The Apple Macintosh has an excellent set of assistives built into the operating system. It is capable of text magnification and text to speech conversion without additional software.

Apple's commitment to accessibility is evident throughout the Mac OS X operating system, which is not only easy to use by design, but also includes a wide variety of features and technologies specifically designed to provide access to users with disabilities. Apple refers to these features collectively as **Universal Access** and has integrated them into the operating system so they can be used in conjunction with a variety of applications from Apple and other developers. Apple is also changing the ways people interact with technology through innovative products like the iPhone, which bring new possibilities for making user interfaces accessible to users with disabilities.

The new features in Universal Access.

Living with Low Vision

In an ad by an automotive company, there is a picture of a woman. She is strong, athletic. She is wearing a tee shirt and running shorts. She has only one leg; the other is a runner's high-tech prosthetic.

The caption reads "Don't ever give up. Not once. Not ever. My dream is to do extraordinary things every day. Life's calling. Where to next?"

This is the attitude we must bring to low vision.

Low Vision Care is not a surgical procedure or medicinal treatment, but rather a rehabilitative program to teach you new strategies to maximize your remaining vision.

There are a myriad of resources to help you live independently and productively. But there is a great deal of redundancy between manufacturers. Try several alternatives before you commit to a solution. Some of you may need our remedial computer lessons. Some of you may want to avoid computers altogether. Each person is different.

We will show these alternative assistives, some free, some inexpensive, some quite expensive. Magnifiers can range from a simple magnifying glass to an electronic closed circuit TV magnifier, such as a Topaz CCTV. Sometimes these freebies will do the job for you. Sometimes you will choose the professional solutions for their quality & ease of use. You may find that screen magnification allows you to read a computer screen. Or you might find it better to have a computer or an iPod read out loud to you. It is up to you. It is your choice.

This course consists of three parts: the teachers, these notes and you. Of these, YOU are the most important part. Your willingness to work hard and to learn are essential for your success.

Computer Settings for Low Vision

Have a comfortable chair and good posture to reduce physical fatigue.

Good lighting in general is an aid for low vision. Minimize glare. Adjust lighting and screen angle.

Take a break every 20 minutes to limit eye strain.

<http://www.uveitis.org/low.html#>

<http://www.eterlab.com/eyedefender/>

<http://www.mdsupport.org/library/lighting.html>

The Ott-Lite "total- spectrum" bulb that produces high color rendering, while retaining excellent contrast and visual acuity. For persons with low vision, the implications for a light that provides enhanced contrast, sharpened clarity, and lower glare while it increases illumination and offers true color rendering are obvious. In addition, because the bulb is cool to the touch, it provides a more comfortable work space.

<http://www.ott-lite.com/Cms/vsp.aspx>

The following setting will allow you to simulate ZoomText using Microsoft Word.

Screen Resolution & Object Size for a PC

1. Right click on a clear area of the Desktop
2. Click on Properties on the drop down menu
3. Alternate method, click on Start > Control Panel > Display.
4. Click on Settings tab
5. Slide Screen Resolution to left (800 x 600)

6. Click on Appearance tab
7. Change Font Size to Large
8. Click on Apply
9. Click on Color Scheme tab
10. Choose High Contrast White or Black, to suit.
11. Click on Apply
12. Click on OK
13. In upper right corner of window, click on Full Screen center box just to the left of the X box.

Monitor Contrast & Brightness Settings

Use the Accessibility Wizard to set contrast & icon size

1. Go to Start > All Programs > Accessories > Accessibility > Accessibility Wizard
2. Follow instructions to set preferences.

Mouse Settings

1. Go to Start > Control Panel
2. Double click on Mouse icon
3. Click on Pointers tab
4. Check the Pointer Shadow box
5. Click on Pointer Options tab
6. Check the Display pointer trails box & set length to medium
7. Check the box marked Show Location of Mouse.
8. Click on Apply
9. Click on OK

When needed, press CTRL key repeatedly to find the mouse.

Mouse Dexterity Exercises

- <http://www.seniornet.org/howto/mouseexercises/mousepractice.html>
- <http://www.lakeco.lib.in.us/mouselinks.htm>

Computer Tips from SeniorNet

http://www.seniornet.org/jsnet/index.php?option=com_content&task=view&id=152&Itemid=1

Increase Website Visibility

To increase the contrast & invert the color of the font in a website, click on the paragraph, hold down the **CTRL** key & type **A**.

To increase the font size, hold down the **CTRL** key & roll the **MOUSE WHEEL** up. This works for most, but not all, websites.

Thumb Drives

Copy a book or any long document to a thumb drive, along with a screen reader, such as Browsealoud and SmartRead. Plug this into any computer, which will now be activatable & able to read.

Document Page Width for 800 x 600 resolution

In Word, go to File > Page Setup

Click on Margins tab

Set Left margin to 0.5

Set Right margin to 3.5

Click on OK

Select the entire document, CTRL A.

Format Paragraph Left-aligned.

Magnification in Microsoft Word

Open a Word document, if necessary.

Click in body of the document, if necessary.

Hold down the CTRL key

Roll the mouse wheel up & down to change the font magnification.

Read Out Loud in Microsoft Word

Open a Word document.

Click on Tools > Speech

The Speech Toolbar will appear.

Click mouse pointer where you want Speech to begin.

Click Speak in Language Toolbar.

Accessible Google

In order to help the visually impaired find the most relevant, useful information on the web, and as quickly as possible, Google developed [Accessible Search](#). Google Accessible Search identifies and prioritizes search results that are more easily used by

blind and visually impaired users – that means pages that are clean and simple (think of the Google homepage!) and that can load without images.

Zoom-Ex is a fast, packaged, light weight scan to speech unit. It folds up and fits in your laptop bag. Runs on any Windows-based computer or laptop.

http://www.zoom-ex.com/html/zoomex_products_zoom_ex.htm

Review & prices for Zoom-Ex in Vision Access Magazine, Vol. 14, No. 4, Page 43.

<http://www.cclvi.org/vaccess/main.htm>

An inexpensive alternative approach is to scan the document on any scanner. Buy one that can scan bound books. This first step just makes a picture of the document. Then run it thru OCR software such as IRIS, Kurzweil 1000 or FineReader, converting it to real text. Then read that file out loud with a screen reader.

The Apple Macintosh & its Special Strengths

The Apple Macintosh has an excellent set of assistives built into the operating system. It is capable of text magnification and text to speech conversion without additional software.

Apple's commitment to accessibility is evident throughout the Mac OS X operating system, which is not only easy to use by design, but also includes a wide variety of features and technologies specifically designed to provide access to users with disabilities. Apple refers to these features

collectively as **Universal Access** and has integrated them into the operating system so they can be used in conjunction with a variety of applications from Apple and other developers. Apple is also changing the ways people interact with technology through innovative products like the iPhone, which bring new possibilities for making user interfaces accessible to users with disabilities.

The new features in Universal Access.

<http://www.apple.com/macosx/features/300.html#universalaccess>

Accessibility Technologies in Mac OS X

- [Zoom](#)
- [Full keyboard navigation](#)
- [Sticky Keys and Slow Keys](#)
- [Mouse Keys](#)
- [Closed-Captioning in QuickTime](#)
- [Visual alert](#)
- [Spoken items](#)
- [Talking alerts](#)
- [Speech recognition](#)
- [Display adjustment](#)

Simple computer keystrokes to control your Macintosh:

Universal Access and <u>VoiceOver</u>	
Keyboard shortcut	Description
Option-Command-8	Turn on Zoom
Option-Command-+ (plus)	Zoom in
Option-Command-- (minus)	Zoom out
Control-Option-Command-8	Switch to White on Black
Control-F1	Turn on Full Keyboard Access

	When Full Keyboard Access is turned on, you can use the key combinations listed in the table below from the Finder.
Control-F2	Full Keyboard Access Highlight Menu
Control-F3	Full Keyboard Access Highlight Dock
Control-F4	Full Keyboard Access Highlight Window (active) or next window behind it
Control-F5	Full Keyboard Access Highlight Toolbar
Control-F6	Full Keyboard Access Highlight Utility window (palette)
Command-F5 or fn-Command-F5	Turn VoiceOver on or off (Mac OS X 10.4 or later)
Control-Option-F8 or fn-Control-Option-F8	Open VoiceOver Utility (Mac OS X 10.4 or later)
Control-Option-F7 or fn-Control-option-F7	Display VoiceOver menu (Mac OS X 10.4 or later)
Control-Option-; or fn-Control-option-;	Enable/disable VoiceOver Control-Option lock (Mac OS X 10.4 or later)

The Universal Access preference pane allows you to turn on Mouse Keys. When Mouse Keys is on, you can use the numeric keypad to move the mouse.
