Concern for ovarian torsion

Acute onset pelvic pain
Nausea/vomiting

Pain control
NPO
UA, Urine pregnancy
Insert foley and fill bladder
GYN consult

Pelvic ultrasound with doppler**

Evidence of ovarian torsion or abnormal pelvic US

Urgent GYN evaluation for OR*

No sonographic evidence of torsion

Ongoing clinical concern for torsion?

Seek alternative dx (acute appendicitis, adnexal mass, ruptured ovarian cyst, tuboovarian abscess, etc.)

Abnormal US Findings
- Enlarged ovary
- Absent or decreased arterial or venous flow (compare to other ovary)
- Ovarian mass
- Abnormal ovarian location

**Call attending radiologist/gynecologist if there are delays
