

# UNC Peripheral Nerve Center

The UNC Peripheral Nerve Center provides multidisciplinary care to patients with peripheral nerve pathology. Peripheral nerve disorders are often challenging to diagnose and treat, and our integrated team works together to create a personalized treatment plan to maximize recovery. Our team of experts can provide both surgical and nonsurgical treatment tailored to each patient's specific diagnosis.

## Noteworthy conditions treated include:

- Chronic peripheral nerve compression
- Acute peripheral nerve injuries
- Nerve tumors
- Brachial plexus injuries

## Nonoperative treatments include:

- Personalized hand therapy programs
- Braces and splints to maximize daily function
- Ultrasound guided injections

## Operative treatments include:

- Nerve decompression surgery
- Nerve repair and nerve grafting
- Nerve transfers
- Peripheral nerve tumor excision
