

UNC PHARMACOLOGY PRESENTS

Ben Goult, PhD

**Professor of Biochemistry
School of Biosciences at the University of Kent**

Hosted by Klaus Hahn, PhD
Ronald G. Thurman Distinguished
Professor, Pharmacology

TALK TITLE

***The MeshCODE theory –
does our brain store
memories in binary format?***

Dr. Goult is recognized for defining the protein talin as a major mechanosensitive signaling hub, and more recently discovered that talin has “molecular memory” providing organisms with the capability to store data through persistent alterations in protein conformation.
